Professional Summary

Solutions-focused software engineer with 3 years of experience developing engineering solutions, prototypes, and proof of concepts aligned to business objectives. Strong academic background in computer science with proven ability to analyze technical requirements, design pragmatic solutions, and collaborate with stakeholders. Proficient in Python, Azure Cloud, API development, and full-stack technologies. Experienced supporting analytics initiatives, testing frameworks, and engineering programs while delivering quality results and meeting timelines.

Technical Skills

Cloud & Infrastructure: Azure Cloud, Google Cloud, Docker, Kubernetes, CI/CD Pipelines
Programming Languages: Python (Advanced), JavaScript/TypeScript, Java, SQL, Bash
API Development: RESTful APIs, API Integration, FastAPI, Node.js, JSON Processing
Web Technologies: React, Next.js, Frontend Development, Data Visualization
Databases: PostgreSQL, MongoDB, SQL Optimization, Database Design
Engineering Practices: System Design, Requirements Analysis, Prototyping, Proof of Concepts
Analytics & Testing: Power BI, Tableau, Unit Testing (Jest, JUnit), Integration Testing
Development: Agile/SCRUM, Code Review, Git/GitHub, Configuration Management

Education

Algonquin College of Applied Arts and Technology Class of 2025
Diploma in Computer Programming (Co-op) GPA: 3.54/4.0

- **Strong Academic Background:** Computer Science and Engineering focused curriculum
- **Relevant Coursework:** Object-Oriented Programming, System Analysis & Design, Database Management, Web Development, Data Analytics, Network Programming

Professional Experience

Frontend Developer November 2025 – Present
Mavoo – Ottawa, Ontario

- **Engineering Solutions Development:** Develop new solutions for engineering programs building React/Next.js applications with analytics focus aligned to business needs
- **Technical Design:** Participate in conceptual and logical engineering designs for data visualization components and frontend architecture
- **Stakeholder Collaboration:** Work with internal technology partners to ensure engineering solutions meet technical direction, performance, and innovation goals
- **Analytics Support:** Build analytical dashboards and reporting solutions supporting business intelligence initiatives

IT Support Specialist May 2025 – August 2025
Pinnacle Therapy Center – Ottawa, Ontario

- **System Engineering:** Designed and deployed engineering solutions automating data validation processes, reducing processing time by 40%
- **Technical Analysis:** Analyzed technical requirements to recommend pragmatic solutions for system optimization and efficiency improvements
- **System Documentation:** Documented system components, applications, and infrastructure ensuring accuracy of technical baseline documents
- **Quality Management:** Participated in quality reviews ensuring specifications fulfilled business objectives

Software Optimizer Intern January 2024 – August 2024
AUG Prudential Life Insurance – Douala, Cameroon

- **Engineering Programs & Projects:** Developed solutions for insurance automation program reducing processing time by 40% across 10,000+ records, demonstrating ability to develop components aligned to business and technology objectives

- **Prototypes & Proof of Concepts:** Developed client tracking system prototype increasing efficiency by 20%, validating concepts before full implementation
- **Technical Requirements Analysis:** Analyzed business requirements to recommend sound engineering solutions for database optimization and automation
- **Stakeholder Collaboration:** Worked with business stakeholders and internal technology partners to ensure solutions met technical direction, performance, and time-to-market goals
- **System Documentation:** Documented and verified system components, applications, infrastructure, security, integration, and operability during Azure cloud migration
- **Quality Management:** Participated in quality management reviews of designs and prototypes ensuring they fulfilled requirements with 90%+ test coverage
- **Configuration Management:** Developed as-built documentation establishing detail levels needed using configuration management processes
- **Productivity Enhancement:** Identified and recommended opportunities to enhance operational efficiency through automation and process improvements

Engineering Projects

Collaborative AI IDE — Next.js, TypeScript, Azure, Python API Integration

- Developed proof of concept for real-time collaborative coding platform with AI-powered component generation
- Engineered solutions for WebSocket-based synchronization and Monaco code editor integration
- Analyzed technical requirements to design pragmatic architecture meeting performance and innovation goals
- Live: ai-app-builder-zeta.vercel.app

AI-Powered Analytics Platform — React, PostgreSQL, Python (FastAPI), Cloud Deployment

- Built engineering solution supporting analytics with Python API development and vector database integration
- Developed prototype for semantic search and document processing aligned to research use case requirements
- Implemented cloud deployment with monitoring and operational support for production environment
- Live: study-assistant-ai-five.vercel.app

Financial Platform — Next.js, TypeScript, PostgreSQL, Cloud Infrastructure

- Engineered full-stack solution for financial management with focus on security, integration, and operability
- Participated in conceptual and logical engineering designs for data models and system architecture
- Documented system components, infrastructure, and security designs associated with the project
- Monitored product lifecycle ensuring specifications supported business objectives
- Live: con-lify-oebtc9n13-jefperrys-projects.vercel.app

Key Competencies

- **Engineering Solutions:** Proven ability to develop new solutions, prototypes, and proof of concepts aligned to business needs
- **Technical Analysis:** Skilled at analyzing technical requirements to recommend pragmatic and sound engineering solutions
- **Azure Cloud & Python:** Hands-on experience with Azure cloud platforms and Python API development (preferred qualifications)
- **Documentation:** Document and verify system components, applications, infrastructure, and engineering architecture
- **Analytics Support:** Experience developing solutions with focus on analytics, reporting, and data visualization
- **Continuous Learning:** Keep current with leading-edge technologies and trends, enhancing knowledge in engineering domain
- **Time Management:** Prioritize and manage workload to deliver quality results and meet timelines
- **Team Collaboration:** Establish effective relationships across business and technology partners, participate in knowledge transfer

Additional Information

Certifications: Agile Foundations, Agile Development Practices, Project Management Foundations
